

Fofurinha, pinte os quadradinhos de acordo com o número de elementos em cada conjunto.

The activity consists of five vertical rectangles, each divided into five horizontal squares. Below these are three boxes containing groups of objects: a box with two apples, a box with one dog, and a box with five flowers. Further down are three more boxes: one with three lollipops and one with five birds. Dotted arrows point from the boxes of objects to the corresponding squares in the rectangles above. For example, the box with two apples points to the second square of the first rectangle, the box with one dog points to the second square of the second rectangle, and the box with five flowers points to the first square of the third rectangle.
